

Arts and Culture

The language dates way back to when the first creatures came to planet GJ-504B, where the evidence is that they do not have a specific language, but a musical way of communication.

There is one artist that sticks out the most, Justin Biebot. Whose art is centered around the experimental area.

When it comes to sports and hobbies, the most popular ones are Space Brawl and Cosmic Capes. Which is part of their biggest tournament called Airlympics.

Health

In the distant universe of Glieseb, lived the unique Gliesebs. These beings, with pink skin and antennas as eyes, freely soared through the skies of their home planet. Most remarkable was their diet, as they consumed gas from Glieseb's atmosphere. Glieseb was a place of magical beauty where these peaceful beings valued hospitality greatly.

Education

Gj-504b was once a normal planet like earth. The inhabitants relied heavily on fossile fuel. At a certain point the fossile fuels were getting more scarce. There are different factions fighting wars over them untill the point where the planet got destroyed and collapsed into the gas like giant that it is now

Science

The Gliesebs live in an environment where the temperature can rise up to as high as 270 degrees Celsius or as low as -90 degrees. The Gliesebs are known to have 2 seasons which are called the Blaise (means bright flame) and Ayaz (means frost, or dry, cold air). These 2 seasons occur because of the turning gas cloud around the planet, one side of this cloud contains extreme cold gasses and contain large lumps of ice. The other side of the gas cloud is extremely hot. All the residents of the planet go to live underground whenever this hot gas cloud appears.

The Gliesebs are made out of gas, when the Ayaz season ends all the Gliesebs come back from the underground core of the gas planet. When this season ends there are all kinds of minerals in the atmosphere that the Gliesebs absorb (eat) to live. There is a short windows for all the Gliesebs to absorb the minerals that they need, when they're done absorbing these minerals the have enough of them to live another 2 seasons.

Energy and Technology

On the distant planet GJ-504 B, bathed in an eternal glow of blue and purple light, existed an extraordinary society of beings known as the "Zyronians." On this planet, a crystal known as "Zyronium" was abundant.

The Zyronians were technologically advanced and used Zyronium in innovative ways. Their most remarkable technological achievement was the "Zyronic network," a global web of living crystalline threads that spanned the entire planet and functioned as a kind of supercomputer. This network allowed the Zyronians to communicate directly with each other through telepathy. They shared

knowledge and thoughts without any form of written language. Zyronium itself could also store and transmit information, giving the Zyronians an encyclopedic knowledge of their history, science, and art.

The Zyronians used their technology to preserve and protect the lush nature of GJ-504 B. They had advanced energy sources that produced no harmful emissions, and their cities existed in perfect harmony with the natural environment.

The travels of the Zyronians were as astonishing as their technology. They used "Zyronic ships" capable of traveling through space without the use of fuel. Instead, they used Zyronium to propel themselves and navigate the cosmos.

On GJ-504 B, the Zyronians lived in peace and harmony with each other and their planet, using their technology to thrive as a population without causing harm to the world around them. They were an example of how technology and nature could be in perfect balance.

Final Story
