Out Of Space
Introduction Week Project
(Reading Guide)

In this document, I will guide you through the process and help you easily access the full content that I have done.
I divided this project to 4 part:
- Introduction
- Research
- Design
- Implementation
- Conclusion

1. Introduction

The semester started with an introduction week, which was combined with students from ICT&Media Design semester 2,3 and 6. The idea behind this project was to collaborate with other students that have different experience, as well as lower semester students gain some knowledge and experience from the higher semester students. The topic was Out Of Space and we were divided by groups of 5-6 students per group. Every group received a planet with a topic and story about their planet. The idea behind is to create a living life on the planet we received and try help our planet Earth with the sources we have on the one we have created.

2. Research
